

MediSense Automated Testing Report

Date: September 27, 2026 **Framework:** Django Test Runner + Selenium WebDriver **Scope:** Core Web Application Functional Testing

Overview

This report details the automated Selenium UI testing performed on the **MediSense** platform. The testing suite focuses on simulating end-to-end user workflows for both Patients and Doctors to ensure the critical paths of the application function as expected.

Test Suites Executed

Suite 1: Core System & SOS Alerts (`test_medi_sense_all.py`)

This suite focuses on the critical emergency alert functionality and basic user access.

1. Patient Login Flow (`test_01_patient_login_success`)

- **Action:** Navigates to the login page, enters patient credentials, and submits the form.
- **Expected Result:** Successful authentication and redirection to the `/patient/` dashboard.
- **Status:**  **PASSED**

2. Trigger Emergency SOS (`test_02_trigger_sos_alert`)

- **Action:** Logs in as a patient, locates the "EMERGENCY SOS" button on the dashboard, clicks it, and accepts the browser confirmation alert.
- **Expected Result:** The system processes the alert and redirects back to the dashboard without errors.
- **Status:**  **PASSED**

3. Doctor Alert Acknowledgement (`test_03_doctor_view_and_acknowledge_sos`)

- **Action:** Logs in as a doctor and accesses the doctor dashboard.
 - **Expected Result:** Dashboard loads successfully, and active SOS alerts from patients are visible.
 - **Status:**  **PASSED**
-

Suite 2: Extended Functionality (`test_extended_functionality.py`)

This suite tests patient onboarding and the daily medical logging processes.

4. Patient Registration & Vitals Input (`test_01_patient_registration_and_vitals`)

- **Action:** Fills out the registration form with valid data, registers a new account, logs in, and submits a complete set of daily vitals (BP, Heart Rate, SpO2, Glucose).
- **Expected Result:** Registration redirects to login; vitals form submission is successful and redirects back to the dashboard.
- **Status:**  **PASSED**

5. Doctor Login & View (`test_02_doctor_login_and_view`)

- **Action:** Authenticates a doctor profile.
 - **Expected Result:** Validates that the doctor's specific routing and dashboard access are correctly enforced.
 - **Status:**  **PASSED**
-

Execution Summary

- **Total Tests Run:** 5
- **Tests Passed:** 5
- **Tests Failed:** 0
- **Execution Time:** ~76.8 seconds (Headless Mode)

Notes for Project Guide Review

- **Visibility Update:** The tests were initially run in "headless" mode (running in the background without opening a physical browser window), which is why no browser popped up on the screen during the first run.
- The testing scripts have now been updated to remove headless mode. Future runs of `python manage.py test` will physically open Google Chrome and perform the automated clicks on-screen, which is ideal for a live demonstration.
